

# SRE 200 years from now

Schools resource pack

# How to take part

## Create your future train!

Can you imagine what trains will look like 200 years from now? Will they fly through the air or zoom underground? Maybe they'll be super fast and have cool features like comfy seats with built in entertainment screens, or even snack machines that serve your favourite treats direct to your seats! Think about how the trains might work and who will be working on them. Now, let's create your future train!

### What to Do:

Draw what you think trains will look like in the year 2225.  
You can work alone or with friends representing your school.

### How to Submit:

Ask your teacher to send your drawing to [socialvalue@srerail.co.uk](mailto:socialvalue@srerail.co.uk) by 3rd June 2025.  
Make sure your drawing is in JPEG format.  
The drawing should be at least 2480 x 3508 pixels.  
Each school can send up to 3 drawings.

### Judging and Prizes

Our team of judges will have two categories, with two finalists chosen from each category:

- Special Education Needs and Disabilities schools
- Secondary Schools/Colleges

The winner will be chosen by a public vote and announced in June 2025. The winning image will have their picture printed on a special display at Waterloo station in London – one of the busiest stations in the country!

## What Might Trains Look Like in 200 Years?

Imagine it's the year 2225 – what kind of super cool trains might we be riding then? We want you to be as creative as possible! Here are some fun ideas to get your imagination going for your drawing:

### 💡 Cool New Designs

- Floating Trains! – Trains might not need wheels anymore! They could float above the tracks using super-powerful magnets or new science we haven't even discovered yet.
- Super Fast – These trains could go faster than a jet—maybe even faster than sound!
- Awesome Shapes – Trains could look like spaceships, animals, or even futuristic rockets. They might glow in the dark or change color as they move!

### 🎮 Fun Stuff Inside

- VR Headsets – Every seat could come with a virtual reality headset so you can play games, go on adventures, or even learn new things while you ride.
- Huge Windows – The windows might be super big and even show you fun facts, cool animations, or let you zoom in on places outside like a giant camera.
- Robot Helpers – Friendly robots could walk up and offer snacks, drinks, or even play games with you!
- Magic Seats – Okay, not really magic—but super smart seats that move and shape themselves to fit you just right. Some might turn into beds or even float!

### 🌍 Earth-Friendly Trains

- No Pollution – These trains could run on clean energy from the sun, wind, or maybe even something new called fusion power (it's like a tiny star!).
- Nature Inside – Some trains might have trees, flowers, and even little waterfalls inside to help keep the air fresh and the ride relaxing.

### 🚀 Space Trains?!

- Maybe one day, we'll have trains on the Moon or Mars, zooming between space stations or futuristic cities on other planets!

## Inspiration for your drawing
